## PTT PRO:
ENTERPRISE CLASS PUSH-TO-TALK AND MESSAGING SERVICES FROM ZEBRA TECHNOLOGIES

NOW AVAILABLE FOR HAZARDOUS AREAS ON BARTEC DEVICES

—

With Zebra's Workforce Connect PTT Pro, you can turn your workers' BARTEC mobile devices into fully-featured walkie-talkies.

At the push of a button workers can place a private call to one user or a group call to up to 250 people, and, send data messages across their site, or across the globe, with communications protected by enterprise-grade security.

With the flexibility to connect with other Bartec devices in hazardous areas, Android or iOS devices in non-hazardous areas and two-way radios, over cellular and Wi-Fi networks, your workforce is always connected regardless of location.

EASILY MANAGE YOUR COMMUNICATIONS

A simple portal provides anywhere and anytime management of every aspect of Workforce Connect PTT Pro.

ACROSS SITES, AND ACROSS THE GLOBE

From adding users to changing permissions, creating groups, defining users' roles and many more.

YOUR PEOPLE CAN INSTANTLY REACH COLLEAGUES

With a Push-to-Talk button (PTT), users can see who's available and make an immediate call to other BARTEC devices, mobiles, or desk phones. The screen works with gloves on too.

2m

WHILE MAINTAINING A SOCIAL DISTANCE

The ease and speed of communications means social distancing can be maintained without impairing collaboration.

THEY CAN CONNECT TO GROUPS TOO...

Discrete teams can reach groups with voice calls or data messages at the touch of a button.

AND RAISE ALERTS

Pre-populated, or free-form text messages can be sent by users e.g. to inform the maintenance team that there's an issue with equipment.

WORK ORDERS CAN BE MANAGED WITH TRACKING

Using the Dispatch Client, the maintenance team can view the location and status of all their engineers across sites to send the nearest one to promptly attend to the issue, and contact them via a PTT call button on their device.

WITH ISSUES RESOLVED COLLABORATIVELY

The engineer can call out to help desks anywhere in the world via PTT to collaborate on the problem.

TICKETS CAN THEN BE SHUT DOWN

When maintenance is completed engineers can send a template SMS to confirm the issue is resolved.

STATUSES UPDATED

Dispatchers can update worklogs and send the engineers to their next task. Historical data can be used to proactively manage maintenance.

⚠️ **Report to Muster Point C immediately!**

AND YOUR TEAMS AND SITES PROTECTED

Emergency alerts can be sent to everyone with voice calls overriding any ongoing calls to ensure that users take immediate precautions.

ALL THROUGH ONE DEVICE

Your users just need to carry one multi-function Bartec device – with everything they need to work productively and safely.
